Biostatistics for Medical and Biomedical Practitioners

Julien I. E. Hoffman

Biostatistics for Medical and Biomedical Practitioners Julien I. E. Hoffman

Biostatistics for Practitioners: An Interpretative Guide for Medicine and Biology deals with several aspects of statistics that are indispensable for researchers and students across the biomedical sciences.

The book features a step-by-step approach, focusing on standard statistical tests, as well as discussions of the most common errors.

The book is based on the author's 40+ years of teaching statistics to medical fellows and biomedical researchers across a wide range of fields. Readers will find hyperlinks to free online tests to help novice statisticians perform their own statistical tests.

- Discusses how to use the standard statistical tests in the biomedical field, as well as how to make statistical inferences (t test, ANOVA, regression etc.)
- Includes non-standards tests, including equivalence or non-inferiority testing, extreme value statistics, cross-over tests, and simple time series procedures such as the runs test and Cusums
- Introduces procedures such as multiple regression, Poisson regression, meta-analysis and resampling statistics, and provides references for further studies
- Presents a vast array of free on-line statistical testing tools which allow readers to practice the procedures learned
