Dynamic Modeling and Applications for Global Economic Analysis

Dynamic Modeling and Applications for Global Economic Analysis

A sequel to *Global Trade Analysis: Modeling and Applications* (Cambridge University Press, 1996, edited by Thomas W. Hertel), this new volume presents the technical aspects of the Global Trade Analysis Program's global dynamic framework (GDyn) and its applications within important global policy issues. The book covers a diverse set of topics including trade reform, growth, investment, technology, demographic change and the environment. Environmental issues are particularly well-suited for analysis with GDyn, and this volume covers its uses with climate change, resource use and technological progress in agriculture. Other applications presented in the book focus on integration issues such as rules governing foreign investment, e-commerce regulations, trade in services, harmonization of technical standards, sanitary and phytosanitary regulations, streamlining of customs procedures, and demographic change and migration.
