Explosion Hazards in the Process Industries Rolf K. Eckhoff

Explosions in the process industries injure or kill hundreds, if not thousands, of workers every year. They occur

in process plants, refineries, platforms and pipelines all over the world. Millions of dollars are spent repairing damages, replacing equipment and rebuilding facilities in the wake of this destruction. This book explores different types of explosions that can occur in a facility and the necessary steps to guard against them. A clear

set of preventative measures, rules and standards combine to make this book a convenient guide to real-world

applications. Additional theoretical issues in the use of probabilistic equations and scenarios make this book an absolute necessity for process industry safety.
